ZHS Compact Excavator

ZHS Compact Excavator

One Tough Animal

Improve your swing... and your drive

Bobcat 430 and 435 ZHS Compact Excavators

No Trade-Offs

Competing Zero Tail Swing excavators typically compromise operator comfort (cab space decreases); overall height (cab height increases); and serviceability (smaller space for component placement). The innovative design of the 430/435 overcomes these faults.

Contractors... Landscapers... Utilities... Rental Operators...

The Bobcat 430 and 435 are the world's first compact excavators with **Zero House Swing (ZHS)** and the **FastTrack drive system** — and they're ready to take on the biggest challenges you can throw at them!

Zero House Swing

Many competing excavators offer Zero Tail Swing, but the 430 and 435 take the concept to the next level — **Zero House Swing (ZHS)**. Not only does the rear of the machine stay within the excavator's width, so does the front end — the machine's left and right front corners! ZHS decreases the chances of accidentally striking buildings or trees during operation. And no damage to the machine or surrounding objects means lower operating costs!

Zero House Swing

gives you 320 degrees
of unrestricted motion.

Tight Spaces — No Problem

Zero House Swing also permits easier spoil placement in tight quarters. If necessary, the operator can slew completely around and dump spoil behind the machine. The ZHS design allows a zero radius swing range of nearly **320 degrees**. This makes the 430 and 435 ideal for jobsites where maneuverability in small spaces is a must.

TWICE as fast as competing excavators

FastTrack™ Drive System

With the revolutionary FastTrack system, dedicated axial piston pumps power the travel motors to give you jobsite advantages that competing machines can't even come close to. Smooth, precise turns. Maximum torque control. Unmatched travel speed.

In fact, the travel speed of the **430/435 is nearly twice the speed** of the nearest competitor. You can move the 430 and 435 much faster within jobsites and between jobsites. Low-range speeds of nearly 3 mph eliminate the need to shift between speed ranges on most backfilling projects. The 430/435 grade, doze and backfill faster than other machines. And because you have more predictable control of the drive system, loading and unloading trailers is also much easier.

Thumb-Control Auxiliary Hydraulic System

A Bobcat exclusive. Variable flow, continuous flow, direction of flow — all auxiliary hydraulic functions are controlled by two convenient switches on the right joystick.

- Flow rate adjusts from zero to full flow.
- Variable flow for precision control of attachments.
- For continuous flow, operator does not have to constantly press or hold a control mechanism.

Cab Height

The 430 is less than eight feet tall, a critical limit on many jobsites.

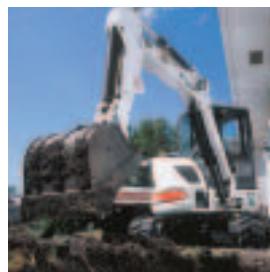

Dual-Cylinder Dozer Blade with Float

How's this for standard equipment? The versatile dozer blade is not only invaluable for backfilling, dozing and leveling, it also serves as a stabilizer and improves lift capacity when lifting loads over the front of the excavator.

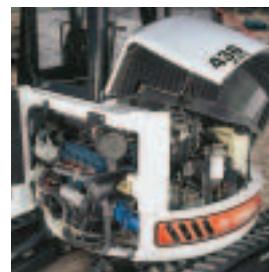

Rubber or Steel Tracks

Tracks distribute the machine's weight over a large area, reducing ground pressure and minimizing damage to lawns and other surfaces. Tracks also allow the excavator to perform where rubber-tired machines bog down. The result — more working days per year.

Impressive Digging Force

The 430 and 435 deliver plenty of power for bigger jobs — excavation, trenching, demolition, material handling and placement — with exceptional digging force!

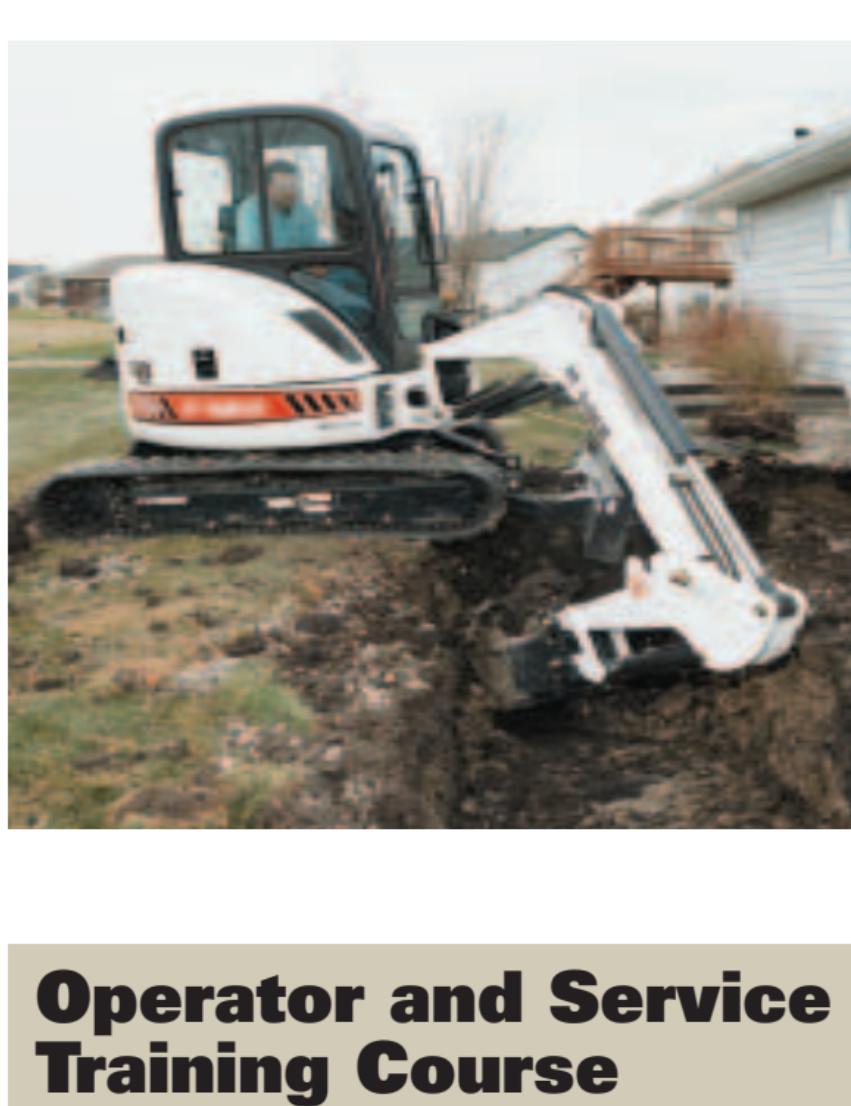

Serviceability

Access to machine components for routine maintenance and service is exceptional because of the swing-open rear tailgate and flip-up side access hood.

Operator Comfort

The spacious cab provides plenty of head room, leg room and elbow room for even the biggest operators. A wide door opening allows easy entry and exit.

Operator and Service Training Course

The Bobcat Compact Excavator Operator and Service Training Course and a 10-minute safety video are available in English and Spanish. Check out the Training Resources link at www.bobcat.com.

Optional Arms

The longer dipper stick reaches farther from one spot to do more work without repositioning the machine. The extra reach, combined with a higher dump height, also makes loading trucks faster and easier.

430 Long Arm Option

The **long arm** version of the 430 gives you an additional 12 in. of reach and 7 in. of dump height, resulting in a maximum reach of 17 ft., 8 in., and a maximum dump height of 10 ft., 10 in.

435 Long Arm Option

The **long arm** on the 435 extends reach by 12.5 in. and dump height by 9.5 in., giving you a maximum reach of 19 ft., 5 in., and a maximum dump height of 12 ft., 9 in.

430 Extendable Arm Option

The **extendable arm** increases the 430's maximum reach to 19 ft., 2 in., with a maximum dump height of 11 ft., 3 in.

Bobcat® 430 and 435 ZHS Excavators

Specifications

**Bobcat
Attachments
for these
models:**

- Auger
- Breaker
- Clamp
- Cutter Crusher
- Grading Blade
- Grading Bucket
- Grapple
- Hydra-Tilt™
- Packer Wheel
- Plate Compactor
- PowerTilt®
- Rotating Grapple
- Ripper
- Trenching Buckets
- Trencher
